Authorized to work in the United States · Open to relocation

PROFESSIONAL SUMMARY

Production Planning Engineer and Master Scheduler with hands-on ERP development capabilities spanning Microsoft Dynamics 365 Business Central (AL/extensions), AX, and SAP-adjacent systems. Led an enterprise ERP migration for an AS9100-certified aerospace manufacturer, built and deployed custom AL extensions to production, and architected an AI automation platform integrating Python with BC's Standard API. Manage production scheduling across 900+ active part numbers supporting programs including F-35, Apache AH-64, and 787. Six Sigma Green Belt with experience managing 100+ manufacturing personnel across the U.S., Mexico, and Turkey. ABET-accredited Management Engineering degree with advanced analytics in Python, SQL, PowerBI, and MATLAB. Trilingual: English, Spanish, Turkish.

CORE COMPETENCIES

Master Scheduling & Production Planning · MRP/ERP Systems (Business Central, AX, SAP) · AL Extension Development
Manufacturing Engineering · Lean (5S, Kaizen, Kanban) · Six Sigma Green Belt · Python, SQL, PowerBI, MATLAB
RDLC Report Design · OData / REST API Integration · Capacity Planning · Demand Forecasting · Inventory Control

PROFESSIONAL EXPERIENCE

Production Planning Engineer / Master Scheduler — Apr 2025 – Present

Air Electro, Inc. – Los Angeles, CA (AS9100/ISO 9001 Aerospace Manufacturer)

- **Manage end-to-end production schedules across 900+ active part numbers and 8+ work centers** for fabrication and assembly operations supporting major defense and commercial aerospace programs (F-35, Apache AH-64, 787).
- **Led the company's ERP migration from AX Dynamics 365 to Microsoft Business Central,** designing the order fulfillment workflow, training the 5-person sales team, and resolving complex post-migration issues across warehouse shipments, item tracking, and lot/bin reconciliation.
- **Built and deployed custom AL extensions to production** via VS Code, including a Split Production Order tool with reservation/order tracking continuity and on-hand inventory FlowFields on the Sales Line page—reducing manual inventory lookups to zero.
- **Planned and executed a bin-by-bin inventory reconciliation across ~21,000 lines,** diagnosing root causes from the AX migration and implementing a two-phase quarantine-and-reload correction strategy that restored inventory accuracy.
- Designed custom RDLC report layouts (Sales Order Confirmation with Ship-To address block) using Python scripting and Visual Studio 2022, eliminating a recurring manual formatting step for the sales team.
- Built automated Excel/PowerQuery dashboards tracking production KPIs, backlog aging, and on-time delivery—adopted as the primary reporting tool by sales, production, and executive leadership.
- Developed a three-state demand classification model (Physical Reserved, Reserved Ordered, On Order) improving inventory allocation accuracy and reducing over-commitment of available stock.

Production Planning Engineer — Sep 2023 – Jun 2024

Teklas Automotive (Tier 1 OEM Supplier to VW, Ford, Stellantis) – Aguascalientes, Mexico

- **Reduced scheduling errors by ~30%** through improved ERP data alignment and standardized planning procedures across extrusion and vulcanization production lines.
- **Optimized inventory levels by ~18%** by implementing Kanban pull systems, eliminating overstock while maintaining zero production stoppages due to material shortages.
- Achieved sub-24-hour bottleneck resolution time by establishing a rapid-response protocol for production disruptions, improving overall equipment uptime.
- **Led and coordinated 100+ production personnel** across multiple shifts in extrusion and vulcanization operations, managing daily scheduling and shift handoffs.
- Designed custom ERP interfaces (SQL-based) and interactive capacity planning dashboards in Excel/PowerBI that became the primary daily tools for the sales team and plant leadership.

Demand Planning & Supply Chain Analyst — Jan 2023 – Sep 2023

Mondelez International (Fortune 500 FMCG) – Istanbul, Turkey

- Analyzed promotional demand data and sell-through patterns to generate demand forecasts, optimizing on-shelf availability and reducing out-of-stock incidents for high-velocity SKUs across multiple distribution channels.
- Coordinated order fulfillment workflows between manufacturing, warehousing, and last-mile logistics, improving on-time delivery performance across a multi-market distribution network.
- Managed key account escalations within SLA targets, serving as the operational link between supply chain planning and commercial teams for a portfolio generating $1B+ in regional revenue.

TECHNICAL PROJECTS

CENTA – Internal AI Automation Platform | *Python, Pandas, BC Standard API v2.0, OData, LLaMA, OCR*

- **Architected a modular Python pipeline** integrating with Microsoft Business Central's Standard API v2.0 for end-to-end process automation in an AS9100 aerospace environment.
- Built Sales Quote auto-generation from customer emails and a read-only Sales Order lifecycle tracker merging data from six BC entities via OData—reducing quote turnaround from hours to minutes.
- Designed for future migration from OData to custom AL API pages ahead of the 2027 OData deprecation timeline.

Custom ERP Pages & Executive Dashboards | *AX Dynamics 365, SQL-Based ERP, PowerBI, Excel/PowerQuery*

- Designed and built role-specific ERP interfaces at both Teklas (SQL-based) and Air Electro (AX/BC) that replaced manual lookups and became the primary daily tools for sales teams and plant leadership.
- Created executive-facing data visualizations delivering real-time operational visibility across sales, production, and C-level audiences.

Multi-Level Production Order & Subcontracting Architecture | *Business Central, AL*

- Designed production order architecture handling cascading BOM splits up to five levels deep, plus subcontracted plating operations with scrap isolated as a separate P&L line item (reason code PLATER-SCRAP).

EDUCATION

Bachelor of Engineering – Management Engineering (ABET-Accredited) 2017 – 2022
Istanbul Technical University (ITU) | QS World Top 350 | Turkey's #1 Engineering University (est. 1773)
Curriculum: Industrial Engineering, Operations Research, Manufacturing Systems, Supply Chain, Business Analytics
Exchange Program: *Universitat Politècnica de Catalunya (UPC), Barcelona, Spain* | QS Top 400

CERTIFICATIONS & CREDENTIALS

Six Sigma Green Belt – The Council of Six Sigma
Spanish Certification (Advanced / C1) – Instituto Cervantes
WES Credential Evaluation – U.S. equivalency confirmed (Bachelor of Engineering)
